Data Visualization with Power BI and Tableau

Practical – III

Roll No.: T052	Name: Divyanjali Yadav
Class: TYIT	Batch:
Date of Assignment: 14-8-2026	Date/Time of Submission: 14-8-2026

Creating Advanced Visualizations in Tableau

a) Create stacked and grouped bar charts for comparison

Stacked Chart:

Bar charts:

b) Build treemaps and pie charts for part-to-whole analysis.

Treemaps:-

Pie charts:-

c) Design scatter plots to identify relationships.

Scatter plots:-

d) Create dual-axis and combination charts.

Dual-axis Chart:-

e) Develop histograms for distribution analysis.

Histograms:

f) Build box-and-whisker plots.

Box-and-whisker plots:-

g) Use Gantt charts and advanced date visualizations.

Gantt charts:-

Insight

- Advanced Tableau charts make complex data easier to understand visually.
- Bar charts help compare different categories.
- Treemaps and pie charts show the proportion or contribution of each category.
- Scatter plots help identify relationships and patterns between variables.
- Histograms and box plots help understand data distribution, spread, and outliers.
- Dual-axis, combination, and Gantt charts help compare multiple measures and analyze data over time.

Conclusion

This practical helped in understanding how advanced visualizations in Tableau can be used to analyze and present data effectively. Different charts provide different types of insights, making it easier to identify comparisons, relationships, distributions, patterns, and trends. Overall, Tableau is a useful tool for converting raw data into meaningful and easy-to-understand visual information.
